2.0 PROJECT INFORMATION

If project is multi-jurisdictional, information must be consolidated in this section.

- 2.1 PROJECT NAME: Vine Street Nixon to Erkenbrecher
- 2.2 BRIEF PROJECT DESCRIPTION (Sections A through C):

A: SPECIFIC LOCATION:

From the intersection of Vine Street and Nixon Street to the intersection of Vine Street and Erkenbrecher Avenue in the community of Clifton. (See attached map)

PROJECT ZIP CODE: 45220

B: PROJECT COMPONENTS:

Improvements include widening Vine Street from 4 lanes (36' wide) to 5 lanes (58' wide) with a wide curb lane for bicycle travel and realign the Erkenbrecher and Vine intersection. Construct a new concrete base with asphalt surface, curbs, sidewalk, traffic signal, and lighting.

C: PHYSICAL DIMENSIONS / CHARACTERISTICS:

5 lanes, 58 feet in width and 2200 feet in length.

D: DESIGN SERVICE CAPACITY:

Detail current service capacity vs. proposed service level.

The current LOS is C. The LOS in 20 years with NO improvement is F.

The LOS in 20 years with the improvement is C.

Road or Bridge: Current ADT 24,106 Year: 2000 Projected ADT: 35.820 Year: 2020

<u>Water/Wastewater:</u> Based on monthly usage of 7,756 gallons per household, attach current rate ordinance. Current Residential Rate: \$______ Proposed Rate: \$

Stormwater: Number of households served:

2.3 USEFUL LIFE / COST ESTIMATE: Project Useful Life: 20 Years.

Attach <u>Registered Professional Engineer's statement</u>, with <u>original seal and signature</u> confirming the project's useful life indicated above and estimated cost.

3.0 REPAIR/REPLACEMENT or NEW/EXPANSION:

TOTAL PORTION OF PROJECT REPAIR/REPLACEMENT \$_725,000.00

TOTAL PORTION OF PROJECT NEW/EXPANSION

\$ 725,000.00

4.0 PROJECT SCHEDULE: *

		BEGIN DATE	END DATE
4.1	Engineering/Design:	1/1/06	9/1/07
4.2	Bid Advertisement and Award:	9 / 1 / 07	12 / 1 / 07
4.3	Construction:	12/31/07	<u> 11 / 1 / 09</u>
4.4	Right-of-Way/Land Acquisition:	1/1/07	12/1/07

^{*} Failure to meet project schedule may result in termination of agreement for approved projects. Modification of dates must be requested in writing by the CEO of record and approved by the commission once the Project Agreement has been executed. The project schedule should be planned around receiving a Project Agreement on or about July 1st.

5.0 APPLICANT INFORMATION:

5.1	CHIEF EXECUTIVE OFFICER	Scott Stiles
	TITLE	Assistant City Manager
	STREET	Room 104, City Hall
		801 Plum Street
	CITY/ZIP	Cincinnati, Ohio 45202

PHONE (513) 352-3475 FAX (513) 352-2458

E-MAIL scott.stiles@cincinnati-oh.gov

5.2	CHIEF FINANCIAL OFFICER	Joe Gray
-----	-------------------------	----------

TITLE Acting Director of Finance
STREET Room 250, City Hall

801 Plum Street

CITY/ZIP Cincinnati, Ohio 45202

PHONE (513) 352-5372 FAX (513) 352-2370

E-MAIL joe.gray@cincinnati-oh.gov

5.3 PROJECT MANAGER Don Gindling, PE

TITLE Principal Public Works Construction Engineer

STREET Room 450, City Hall

801 Plum Street

CITY/ZIP Cincinnati, Ohio 45202

PHONE (513).352-1518 FAX (513).352-1581

E-MAIL don.gindling@cincinnati-oh.gov

Changes in Project Officials must be submitted in writing from the CEO.

6.0 ATTACHMENTS/COMPLETENESS REVIEW:

Confirm in the blocks [] below that each item listed is attached.
A certified copy of the legislation by the governing body of the applicant authorizing a designated official to sign and submit this application and execute contracts. This individual should sign under 7.0, Applicant Certification, below.
[X] A certification signed by the applicant's chief financial officer stating <u>all local share</u> funds required for the project will be available on or before the dates listed in the Project Schedule section. If the application involves a request for Ioan (RLP or SCIP), a certification signed by the CFO which identifies a specific revenue source for repaying the loan also must be attached. Both certifications can be accomplished in the same letter.
[X] A registered professional engineer's detailed cost estimate and useful life statement, as required in 164-1-13, 164-1-14, and 164-1-16 of the Ohio Administrative Code. Estimates shall contain an engineer's <u>original seal or stamp and signature.</u>
[NA] A cooperation agreement (if the project involves more than one subdivision or district) which identifies the fiscal and administrative responsibilities of each participant.
[NA] Projects which include new and expansion components <u>and</u> potentially affect productive farmland should include a statement evaluating the potential impact. If there is a potential impact, the Governor's Executive Order 98-VII and the OPWC Farmland Preservation Review Advisory apply.
[] Capital Improvements Report: (Required by O.R.C. Chapter 164.06 on standard form)
[X] Supporting Documentation: Materials such as additional project description, photographs, economic impact (temporary and/or full time jobs likely to be created as a result of the project), accident reports, impact on school zones, and other information to assist your district committee in ranking your project. Be sure to include supplements which may be required by your <i>local</i> District Public Works Integrating Committee.
7.0 APPLICANT CERTIFICATION:
The undersigned certifies that: (1) he/she is legally authorized to request and accept financial assistance from the Ohio Public Works Commission; (2) to the best of his/her knowledge and belief, all representations that are part of this application are true and correct; (3) all official documents and commitments of the applicant that are part of this application have been duly authorized by the governing body of the applicant; and, (4) should the requested financial assistance be provided, that in the execution of this project, the applicant will comply with all assurances required by Ohio Law, including those involving Buy Ohio and prevailing wages.
Applicant certifies that physical construction on the project as defined in the application has NOT begun, and will not begin until a Project Agreement on this project has been executed with the Ohio Public Works Commission. Action to the contrary will result in termination of the agreement and withdrawal of Ohio Public Works Commission funding of the project.
Scott Stiles, Assistant City Manager
Certifying Representative (Type or Print Name and Title)
Signature/Date Signed

September 8, 2006

W. Laurence Bicking, Director Ohio Public Works Commission 65 East State Street, Suite 312 Columbus, Ohio 43215-4213

Re: Status of Funds for Local Share Round 21 SCIP/LTIP Project Grants

Dear Mr. Bicking:

The local matching shares for the following Round 21 SCIP/LTIP Projects are recommended by the City Manager for funding in the City's Capital Improvement Program:

STREET IMPROVEMENT PROJECTS (2)

Vine Street - Nixon Street to Erkenbrecher Avenue

Widen Vine Street between Nixon Street and Erkenbrecher Avenue to improve traffic safety, capacity, and to provide bicycle travel lanes. Improvements are also included for the Vine Street/Erkenbrecher Avenue intersection.

HAM-US 27-6.49 (Colerain Avenue/West Fork Road/Virginia Avenue Intersection Improvement)

Upgrade the intersection of Colerain Avenue, West Fork Road, and Virginia Avenue to improve safety and capacity. Also realign the intersection of Chase Avenue and Virginia Avenue to improve safety and capacity.

BRIDGE REPLACEMENT PROJECT

Center Hill Avenue Bridge over the Mill Creek

Replace the deteriorated bridge over the Mill Creek with a modern structure meeting current standards.

BRIDGE RECONSTRUCTION PROJECT

Eighth Street Viaduct

Reconstruct portions of this deteriorated viaduct structure and replace two separate bridges at the west end of the Viaduct over the B&O railroad tracks. Reconstruct intersection with Burns Street.

STREET IMPROVEMENT / BRIDGE REPLACEMENT PROJECT

Spring Grove Avenue / Clifton Avenue Bridge Improvements

Replace existing Clifton Avenue Bridge over the Mill Creek with a new wider structure. Widen Clifton Avenue to permit a southbound left turn lane onto Kenard Avenue. Realign curbs and reconstruct signals on Spring Grove Avenue between Winton Road and Clifton Avenue to provide a safer, less confusing corridor.

The City Manager is committed to including the local funding needed to complete the project financing in the City's Capital Improvement Program. Sources of local funding for the City's Capital Improvement Program include dedicated revenue from the City's Earnings Tax, Southern Railway Lease proceeds, Bond proceeds, and Municipal Road funds. Additional funding has been committed by the Ohio Department of Transportation.

If you have any questions or need additional information regarding project financing, please contact me at (513) 352-6275.

Sincerely,

Joe Gray, Acting Director Department of Finance

COUNCIL OF THE CITY OF CINCINNATI

STATE OF OHIO

OFFICE OF THE CLERK OF COUNCIL

I HEREBY CERTIFY that the foregoing transcript is correctly copied from the books, papers and journals of the City of Cincinnati, State of Ohio, kept under authority and by the direction of the Council thereof.

ORDINANCE 0300-2006 passed by the Council of the City of Cincinnati at their session on October 25, 2006 entitled:

ORDINANCE (EMERGENCY) submitted by Milton Dohoney, Jr., City Manager, on 10/18/2006, authorizing the City Manager to apply for and accept bridge replacement, bridge reconstruction, and street improvement funding grants, and water supply facility improvement loans and loan assistance from the State of Ohio Public Works Commission, in the approximate amount of \$14,640,000.00 and to execute any agreements necessary for the receipt and administration of said grants, loans, and loan assistance.

IN TESTIMONY WHEREOF I have

hereunto set my name and affixed the seal of the Clerk of Council Office this 2^{nd} day of

November in the year Two Thousand and Six

Deputy Clerk

City of Cincinnati

An Ordinance No. 300

2006

AUTHORIZING the City Manager to apply for and accept bridge replacement, bridge reconstruction, and street improvement funding grants, and water supply facility improvement loans and Ioan assistance from the State of Ohio Public Works Commission, in the approximate amount of \$14,640,000.00, and to execute any agreements necessary for the receipt and administration of said grants, loans, and loan assistance.

WHEREAS, the State Capital Improvement Program, the Local Transportation Improvement Program, and the State Revolving Loan Program provide for infrastructure funding; and

WHEREAS, the District 2 Integrating Committee is accepting applications for projects within Hamilton County, State of Ohio; and

WHEREAS, the City of Cincinnati has the required \$5,620,400.00 in matching City funds for Program Year 2007, for two (2) street improvement projects, namely Vine Street from Nixon Street to Erkenbrecher Avenue, and the Colerain/West Fork/Virginia Intersection Improvement (HAM-27-6.49); one (1) street improvement/bridge replacement project, namely Spring Grove Avenue/Clifton Avenue Bridge Improvement; one (1) bridge replacement project, namely Center Hill Avenue Bridge over Millcreek; one (1) bridge reconstruction project, namely Eighth Street Viaduct; one (1) water main rehabilitation project, namely Gest Street Clean and Line Water Main project; and one (1) loan assistance application for the Countywide Water Main Replacement Project – Phase V; and now, therefore,

BE IT ORDAINED by the Council of the City of Cincinnati, State of Ohio:

Section 1. That the City Manager is hereby authorized to execute and file applications, on behalf of the City of Cincinnati, with the Ohio Public Works Commission through the Hamilton County District 2 Integrating Committee, for grants, loan assistance, and loans at an interest rate acceptable to the City of Cincinnati Director of Finance in the approximate amount of \$14,640,000.00 for funding two (2) street improvement projects, namely Vine Street from Nixon Street to Erkenbrecher Avenue, and the Colerain/West Fork/Virginia Intersection Improvement (HAM-27-6.49); one (1) street improvement/bridge replacement

project, namely Spring Grove Avenue/Clifton Avenue Bridge Improvement; one (1) bridge replacement project, namely Center Hill Avenue Bridge over Millcreek; one (1) bridge reconstruction project, namely Eighth Street Viaduct; one (1) water main rehabilitation project, namely Gest Street Clean and Line Water Main project; and one (1) loan assistance application for the Countywide Water Main Replacement Project - Phase V.

Section 2. That the City Manager is hereby authorized to accept such grants, loan assistance, and Ioans at an interest rate acceptable to the City of Cincinnati Director of Finance, if awarded by the Ohio Public Works Commission.

Section 3. That the City Manager is hereby authorized to execute such agreements and other documents as may required by the State for receipt and administration of the above grants, loan assistance, and loans.

Section 4. That, if the Ohio Public Works Commission approves the credit enhancements and loans, the Director of Finance is hereby directed to deposit said funds in the appropriate account. The Director of Finance is further authorized to disburse said funds upon receipt of the proper vouchers.

Section 5. That this ordinance shall be an emergency measure necessary for the preservation of the public peace, health, safety and general welfare and shall, subject to the terms of Article II, Section 6 of the Charter, be effective immediately. The reason for the emergency is the immediate need to ensure acceptance of the grant applications and to ensure proper funding mechanisms are in place at the earliest possible time.

DA EDMANIGNO TART Y HEREBY CORP

Clerk of Council

CERTIFICATION OF TRAFFIC COUNT

As required by the District 2 Integrating Committee, I hereby certify that the traffic counts herein attached to the <u>Vine Street – Nixon to Erkenbrecker</u> project application are a true and accurate count done by the City of Cincinnati's Traffic Engineering Division.

Stephen I. Niemeier, P.E. Principal Traffic Engineer

Adventure • Conservation • Education

Mr. Bill Brayshaw, County Engineer 10480 Burlington Road Cincinnati, OH 45231

Dear Mr. Brayshaw:

The Cincinnati Zoo & Botanical Garden supports the efforts of the City of Cincinnati in their plans for roadway improvements along Vine Street between Martin Luther King and Erkenbrecher.

The Vine Street widening project is critical to the future business development of the Cincinnati Zoo, Cincinnati Children's Medical Center and the U.S. Veterans Hospital who will ultimately share a newly created parking lot at the intersection of Vine and Erkenbrecher. The parking has freed up much needed development space at the Cincinnati Zoo allowing for the construction of a Education Center partnering with the Cincinnati Public Schools which will create 15 new jobs. It also will allow the construction of a dry lab at the VA Hospital adding construction and 40 permanent jobs. The Cincinnati Children's Medical Center has a facility under construction which will add up to 1000 jobs by the end of 2008.

The widened Vine Street project will allow for safe and efficient access to each of these facilities as well as the ability for the Zoo to create a new entry village, which was the original historical entrance dating back to 1892. The Zoo's desire to create a gateway to that new entry along Vine Street is important for business growth, long-term health and viability of the Zoo. Without the realignment and widening, the ability for the Zoo to move forward on the infrastructure project is gone. The roadway improvements are a critical link to allow the future development, growth and vitality of the Zoo campus.

The total economic impact of the Cincinnati Zoo in this area is \$88.4 million. This includes a household earnings impact of over \$30 million. The total impact on employment in Greater Cincinnati is more than 1,200 jobs. Together, these economic activities generated nearly \$2.7 million annually in local sales, earnings, and property tax revenue. This includes more than \$700,000 for Hamilton County and the City of Cincinnati in sales and earnings taxes, and another \$1.2 million in property taxes for Hamilton County jurisdictions. When the total economic impact of \$88.4 million is compared with the Zoo's spending of \$23.0 million for operations and construction, it results in an overall economic multiplier of 3.84, a number that very few local enterprises can match.

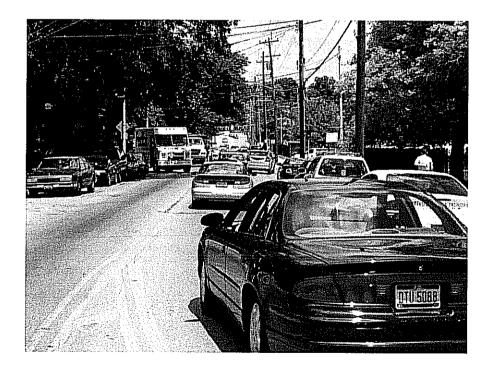

Gregg Hudson, President & CEO Cincinnati Zoo & Botanical Garden

Logar

VINE STREET

Road has buckling and ruts.

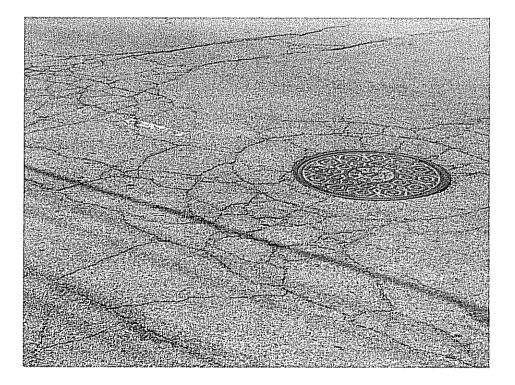

Narrow lanes making it congested.

VINE STREET

Holes in pavement and sunken curb.

Various cracking thru out project limits.

ADDITIONAL SUPPORT INFORMATION

For Program Year 2007 (July 1, 2007 through June 30, 2008), jurisdictions shall provide the following support information to help determine which projects will be funded. Information on this form must be accurate, and where called for, based on sound engineering principles. Documentation to substantiate the individual items, as noted, is required. The applicant should also use the rating system and its' addendum as a guide. The examples listed in this addendum are not a complete list, but only a small sampling of situations that may be relevant to a given project.

IF YOU ARE APPLYING FOR A GRANT, WILL YOU BE WILLING TO ACCEPT A LOAN IF ASKED BY THE DISTRICT? _____YES __X__NO (ANSWER REQUIRED) Note: Answering "Yes" will not increase your score and answering "NO" will not decrease your score.

1) What is the physical condition of the existing infrastructure that is to be replaced or repaired?

Give a statement of the nature of the deficient conditions of the present facility exclusive of capacity, serviceability, health and/or safety issues. If known, give the approximate age of the infrastructure to be replaced, repaired, or expanded. Use documentation (if possible) to support your statement. Documentation may include (but is not limited to): ODOT BR86 reports, pavement management condition reports, televised underground system reports, age inventory reports, maintenance records, etc., and will only be considered if included in the original application. Examples of deficiencies include: structural condition; substandard design elements such as widths, grades, curves, sight distances, drainage structures, etc.

Geometric design:

Deficiencies: Vine Street is a principal arterial and is 36' wide, striped for 4-9' lanes. These 9' lanes are substandard. The Vine Street and Erkenbrecher Intersection has poor sight distance and poor horizontal geometry. The intersection is large and wide with multiple islands, which creates a confusing driving situation for the motoring public.

Solution: The project will widen Vine Street to 58', which will allow 2-14' curb lanes, 2-10' through lanes, and 1-10 turn lane, realign the Vine and Erkenbrecher intersection to a 90 degree angle which will improve the sight distance, eliminate the islands and reduce the confusion to the motorists.

Pavement:

Deficiencies: The roadway has an asphalt surface that is beginning to show signs of fatigue. The pavement is warping and shoving in the wheel paths showing signs of wear especially at the bus stops where replacement with full depth concrete pavement is required to prevent the shoving from recurring. The current pavement condition is fair with a PCI rating of 61 out of 100. Over the past two years, there have been 20 pothole and pavement repair requests. This information was obtained from the Cincinnati Customer Service Response Database (CSR). The documentation is attached. This attached information documents the pavement failures and the poor ride quality.

Solution: The project will remove the aging pavement base and asphalt surface and fully reconstruct with concrete base and asphalt surface course to provide a smooth driving surface.

Signals:

Deficiencies: The two signals along Vine Street have reached the end of their service life. The City of Cincinnati establishes twenty years as service life for signal equipment. There have been 41 customer service requests from the CSR database (see attached) in the past two years. This information documents that the existing equipment is in dire need of repair/replacement. Solution: The signals throughout the project will be rebuilt with the latest technology in signal equipment, which will provide us with greater efficiency through this corridor.

2) How important is the project to the safety of the Public and the citizens of the District and/or service area?

Give a statement of the projects effect on the safety of the service area. The design of the project is intended to reduce existing accident rate, promote safer conditions, and reduce the danger of risk, liability or injury. (Typical examples

may include the effects of the completed project on accident rates, emergency response time, fire protection, and highway capacity.) Please be specific and provide documentation if necessary to substantiate the data. The applicant must demonstrate the type of problems that exist, the frequency and severity of the problems and the method of correction.

Accidents:

Problems: The Vine Street corridor has had 74 accidents the past two years. See attached documentation. The rate is 10 crashes/million vehicle miles/year/mile, which is 40% above the city average of 7. 33% of the accidents were parked vehicle/sideswipe accidents caused by he narrow lane widths of Vine Street. Nearly 50% of the accidents were rear end accidents. These accidents were caused by sudden stops, which can be attributed to no left turn lane and the high volume of traffic on Vine Street. Currently, the LOS is C but with no street improvement the LOS will degrade to an F in 20 years.

Solution: Widening Vine Street from 36' to 58' will reduce the parked vehicle/sideswipe accidents by allowing more width to travel and the left turn lane will reduce the rear end accidents by reducing the number of conflict points by pulling left turning vehicles out of the through lanes.

Capacity:

Problems: There are two signalized intersections completely within the project limits. The Vine Street/Erkenbrecher Avenue intersection is heavily utilized by zoo traffic and includes a pedestrian entrance into the Zoo. The current Level of Service (LOS) for this intersection is C. The projected LOS, if there are no improvements, will diminish to a LOS F in twenty years. The second signalized intersection within the project limits is the Vine Street/VA Hospital drive. This serves as the main entrance into the VA Hospital. Attached are Synchro outputs for the two signalized intersections on Vine Street.

Solution: With the proposed improvements to Vine Street, the LOS at the signalized intersection of Vine and Erkenbrecher in twenty years would be LOS C instead of a LOS F. At the signalized intersection of Vine and VA Hospital, the existing LOS A will remain a LOS A in the PM peak but improve the AM peak from a LOS B to LOS A after the project is complete. The Uptown Transportation study, which is sponsored by the City of Cincinnati, ODOT, OKI, UC and the Uptown Consortium, has a traffic signal system evaluation. The performance of the system shows a reduction in vehicle delay of 25% with the improvement to Martin Luther King Ir (MLK) Drive assuming a LOS C for the Vine Street corridor. The MLK Drive improvements are currently under construction meeting the project at Nixon (phase 2 of the Vine Street Corridor). Therefore, the improvements to Vine Street are critical to the overall success of the traffic signal system in the Uptown area. Please see attached information.

3) How important is the project to the health of the Public and the citizens of the District and/or service area?

Give a statement of the projects effect on the health of the service area. The design of the project will improve the overall condition of the facility so as to reduce or eliminate potential for disease, or correct concerns regarding the environmental health of the area. (Typical examples may include the effects of the completed project by improving or adding storm drainage or sanitary facilities, replacing lead jointed water lines, etc.). Please be specific and provide documentation if necessary to substantiate the data. The applicant must demonstrate the type of problems that exist, the frequency and severity of the problems and the method of correction.

The project will improve	the storm drainage and pa	avement runoff.	
* " 1	 		

4) Does the project help meet the infrastructure repair and replacement needs of the applying jurisdiction?

The jurisdiction must submit a listing in priority order of the projects for which it is applying. Points will be awarded on

the basis of most to least importance.

Priority 1 Eighth St	reet Viaduct Reconstruction
Priority 2 Vine Stre	et Improvements
Priority 3 Colerain/	West Fork/Virginia Intersection Improvement
Priority 4 Center H	ill Bridge Replacement
Priority 5 Spring G	cove/Clifton Improvements
	user fee funded agency be participating in the funding of the project?
Minor casting adjustme	nts for CWW will be included with the roadway construction

6) Economic Growth - How will the completed project enhance economic growth

Give a statement of the projects effect on the economic growth of the service area (be specific). The proposed project will have large effect on economic growth. This project will allow better traffic flow through the uptown region. The project is a major part of the Uptown Crossing Plan. See attached sheets. The plan shows a new grid type development planned for the west side of Vine Street from Nixon to Shields and the new Zoo parking lot on Vine Street from Shields to Erkenbrecher with a Pedestrian bridge over Vine Street from the parking lot to the Zoo entrance. The project is also part of Uptown Transportation Study Recommended Corridor Projects. See attached sheets. The Vine Street is one of thirteen projects that are recommended. Many of the projects are finished, under construction or already funded. The Vine Street corridor improvements will allow better access to Children's Hospital, VA Hospital, University Hospital, and Cincinnati Zoo for visitors and employees. This uptown area is the largest employment area outside of Downtown Cincinnati. Please see attached letter from the Cincinnati Zoo & Botanical Garden concerning job creation and the ability to permit more development resulting from the improvements to Vine Street.

7) Matching Funds - LOCAL

The information regarding local matching funds is to be filed by the applicant in Section 1.2 (b) of the Ohio Public Works Association's "Application For Financial Assistance" form.

8) Matching Funds - OTHER

The information regarding local matching funds is to be filed by the applicant in Section 1.2 (c) of the Ohio Public Works Association's "Application For Financial Assistance" form. If MRF funds are being used for matching funds, the MRF application must have been filed by September 1st of this year for this project with the Hamilton County Engineer's Office. List below all "other" funding the source(s).

Municipal Road Fund – \$290,000

	,		TALLE SALVES	actus c	****	I CEIVIIIII	*********

Give a brief statement concerning the regional significance of the infrastructure to be replaced, repaired, or expanded. Vine Street provides access to the largest employment areas in Cincinnati outside of downtown. Employers consist of University of Cincinnati, the Zoo, the EPA, and all the Hospitals i.e. Children', University, Shriners and the UC Medical School. Access to I-75 via Martin Luther King and Mitchell are from Vine Street. This is a major SORTA route. The project is in the Uptown Transportation Study and will spur new development per the Uptown Crossing Plan.

12) What is the overall economic health of the jurisdiction?

General Statement for Rating Criteria

Points awarded for all items will be based on engineering experience, field verification, application information and other information supplied by the applying agency, which is deemed to be relevant by the Support Staff. The examples listed in this addendum are not a complete list, but only a small sampling of situations that may be relevant to a given project.

Appeal Score

CIRCLE THE APPROPRIATE RATING

What is the physical condition of the existing infrastructure that is to be replaced or repaired?

25 - Failed

1)

23 - Critical

≥20 - Very Poor

17 - Poor

15 - Moderately Poor

10 - Moderately Fair

(5)- Fair Condition

0 - Good or Better

Criterion 1 - Condition

Condition of the particular infrastructure to be repaired, reconstructed or replaced shall be a measure of the degree of reduction in condition from its original state. Capacity, serviceability, safety and health shall not be considered in this criterion. Any documentation the Applicant wishes to be considered must be included in the application package.

Definitions:

Failed Condition –requires complete reconstruction where no part of the existing facility is salvageable. (E.g. Roads: complete reconstruction of roadway, curbs and base; Bridges: complete removal and replacement of bridge; Underground: removal and replacement of an underground drainage or water system.

<u>Critical Condition</u> - requires partial reconstruction to maintain integrity. (E.g. Roads: reconstruction of roadway/curbs can be saved; Bridges: removal and replacement of bridge with abutment modification; Underground: removal and replacement of part of an underground drainage or water system.

<u>Very Poor Condition</u> - requires extensive rehabilitation to maintain integrity. (E.g. Roads: extensive full depth, partial depth and curb repair of a roadway with a structural overlay; Bridges: superstructure replacement; Underground: repair of joints and/or replacement of pipe sections.

<u>Poor Condition</u> - requires standard rehabilitation to maintain integrity. (E.g. Roads: moderate full depth, partial depth and curb repair to a roadway with no structural overlay needed or structural overlay with minor repairs to a roadway needed; Bridges: extensive patching of substructure and replacement of deck; Underground: insituform or other in ground repairs.

Moderately Poor Condition - requires minor rehabilitation to maintain integrity. (E.g. Roads: minor full depth, partial depth or curb repairs to a roadway with either a thin overlay or no overlay needed; Bridges: major structural patching and/or major deck repair.

Moderately Fair Condition - requires extensive maintenance to maintain integrity. (E.g. Roads: thin or no overlay with extensive crack sealing, minor partial depth and/or slurry or rejuvenation; Bridges: minor structural patching, deck repair, erosion control.)

Fair Condition - requires routine maintenance to maintain integrity. (E.g. Roads: slurry seal, rejuvenation or routine crack sealing to the roadway; Bridges: minor structural patching.)

Good or Better Condition - little to no maintenance required to maintain integrity.

Note: If the infrastructure is in "good" or better condition, it will NOT be considered for SCIP/LTIP funding unless it is an expansion project that will improve serviceability.

***********	How important is the project to the health of the Public and the citizens of the Distric 25 - Highly significant importance 20 - Considerably significant importance 15 - Moderate importance 10 - Minimal importance 5 - Poorly documented importance	
	How important is the project to the health of the Public and the citizens of the Distric 25 - Highly significant importance 20 - Considerably significant importance 15 - Moderate importance 10 - Minimal importance 5 - Poorly documented importance 0 - No measurable impact	Appeal Score The health problem that would be eliminated by the project, or would routine maintenance that complaints if any are recorded? In the project, would improved sanitary sewer.

4) Note: Applying agency's priority listing (part of the Additional Support Information) must be filed with application(s).

25 - First priority project	Appeal Score
20- Second priority project	
15 -Third priority project	
10 - Fourth priority project	
5 - Fifth priority project or lower	

Criterion 4 – Jurisdiction's Priority Listing

The applying agency must submit a listing in priority order of the projects for which it is applying. Points will be awarded on the basis of most to least importance. The form is included in the Additional Support Information.

To what extent will a user fee funded agency be 10 . Less than 10%	participating in the funding of the project:
9 – 10% to 19.99%	
8 – 20% to 29.99%	Appeal Score
7 – 30% to 39.99%	• •
6 – 40% to 49.99%	
5 – 50% to 59.99%	
4 – 60% to 69.99%	
3 – 70% to 79.99%	
2 – 80% to 89.99%	
1 – 90% to 95%	
0 – Above 95%	

Criterion 5 - User Fee-funded Agency Participation

To what extent will a user fee funded agency be participating in the funding of the project? (Example: rates for water or sewer, frontage assessments, etc.). The applying agency must submit documentation.

6) Economic Growth – How the completed project will enhance economic growth (See definitions).

10 - The project will directly secure new employment	Appeal Score
5 – The project will permit more development	
The project will not impact development	

Criterion 6 - Economic Growth

Will the completed project enhance economic growth and/or development in the service area?

Definitions

Secure new employment: The project as designed will secure development/employers, which will immediately add new permanent employees to the jurisdiction. The applying agency must submit details.

Permit more development: The project as designed will permit additional business development/employment. The applying agency must supply details.

The project will not impact development: The project will have no impact on business development.

Note: Each project is looked at on an individual basis to determine if any aspects of this category apply.

Matching Funds - LOCAL

10 - This project is a loan or credit enhancement

10-50% or higher

8-40% to 49.99%

List total percentage of "Local" funds _______%

6-30% to 39.99%

4-20% to 29.99%

2 - 10% to 19.99%

(0) Less than 10%

Criterion 7 - Matching Funds - Local

The percentage of matching funds which come directly from the budget of the applying agency. Ten points shall be awarded if a loan request is at least 50% of the total project cost. (If the applying agency is not a user fee funded agency, any funds to be provided by a user fee generating agency will be considered "Matching Funds – Other")

Matching Funds – OTHER	List total percentage of "Other" funds // // %		
10 - 50% or higher	List below each funding so	urce and percentage	
8 – 40% to 49.99%	MRI		
6 – 30% to 39.99%		%	
4 – 20% to 29.99%		_%	
(2)-10% to 19.99%			
1 – 1% to 9.99%		<u></u> %	
0 – Less than 1%			

Criterion 8 - Matching Funds - Other

The percentage of matching funds that come from funding sources other than those mentioned in Criterion 7. A letter from the outside funding agency stating their financial participation in the project and the amount of funding is required to receive points. For MRF, a copy of the current application form filed with the Hamilton County Engineer's Office meets the requirement.

9) Will the project alleviate serious capacity problems or hazards or respond to the future level of service needs of the district?

10 - Project design is for future demand.	Appeal Score
№ Project design is for partial future demand.	
\$62 Project design is for current demand.	

- 4 Project design is for minimal increase in capacity.
- 2 Project design is for no increase in capacity.

Criterion 9 - Alleviate Capacity Problems

The applying agency shall provide a narrative, along with pertinent support documentation, which describe the existing deficiencies and showing how congestion will be reduced or eliminated and how service will be improved to meet the needs of any expected growth or development. A formal capacity analysis accompanying the application would be beneficial. Projected traffic or demand should be calculated as follows:

Formula:

Existing users x design year factor = projected users

Design Year	<u>Design year</u>	· factor		
	<u>Urban</u>	Suburban	Rural	
20	1.40	1.70	1.60	
10	1.20	1.35	1.30	

Definitions:

Future demand - Project will eliminate existing congestion or deficiencies and will provide sufficient capacity or service for twentyyear projected demand or fully developed area conditions. Justification must be supplied if the area is already largely developed or undevelopable and thus the projection factors used deviate from the above table.

Partial future demand - Project will eliminate existing congestion or deficiencies and will provide sufficient capacity or service for ten-year projected demand or partially developed area conditions. Justification must be supplied if the area is already largely developed or undevelopable and thus the projection factors used deviate from the above table.

Current demand - Project will eliminate existing congestion or deficiencies and will provide sufficient capacity or service only for existing demand and conditions.

Minimal increase - Project will reduce but not eliminate existing congestion or deficiencies and will provide a minimal but less than sufficient increase in existing capacity or service for existing demand and conditions.

No increase - Project will have no effect on existing congestion or deficiencies and provide no increase in capacity or service for existing demand and conditions.

- 10) Readiness to Proceed If SCIP/LTIP funds are granted, when would the construction contract be awarded?
 - (5) Will be under contract by December 31, 2007 and no delinquent projects in Rounds 18 & 19
 - 3 Will be under contract by March 31, 2008 and/or one delinquent project in Rounds 18 & 19
 - 0 Will not be under contract by March 31, 2008 and/or more than one delinquent project in Rounds 18 & 19

Criterion 10 - Readiness to Proceed

The Support Staff will assign points based on engineering experience and status of design plans. A project is considered delinquent when it has not received a notice to proceed within the time stated on the original application and no time extension has been granted by the OPWC. An applying agency receiving approval for a project and subsequently canceling the same after the bid date on the application will receive zero (0) points under this round and the following round.

Appeal Score

- Does the infrastructure have regional impact? Consider origination and destination of traffic, functional classifications, size of service area, and number of jurisdictions served, etc.
 - 10 Major Impact

-- Significant Impact

- 6 Moderate Impact
- 4 Minor Impact
- 2 Minimal or No Impact

Criterion 11 - Regional Impact

The regional significance of the infrastructure that is being repaired or replaced.

Definitions:

Major Impact – Roads: Major Arterial: A direct connector to an Interstate Highway; Arterials are intended to provide a greater degree of mobility rather than land access. Arterials generally convey large traffic volumes for distances greater than one mile. A major arterial is a highway that is of regional importance and is intended to serve beyond the county. It may connect urban centers with one another and/or with outlying communities and employment or shopping centers. A major arterial is intended primarily to serve through traffic.

<u>Significant Impact</u> – Roads: <u>Minor Arterial</u>: A roadway, also serving through traffic, that is similar in function to a major arterial, but operates with lower traffic volumes, serves trips of shorter distances (but still greater than one mile), and may provide a higher degree of property access than do major arterials.

Moderate Impact – Roads: Major Collector: A roadway that provides for traffic movement between local roads/streets and arterials or community-wide activity centers and carries moderate traffic volumes over moderate distances (generally less than one mile). Major collectors may also provide direct access to abutting properties, such as regional shopping centers, large industrial parks, major subdivisions and community-wide recreational facilities, but typically not individual residences. Most major collectors are also county roads and are therefore through streets.

<u>Minor Impact</u> – Roads: <u>Minor Collector</u>: A roadway similar in functions to a major collector but which carries lower traffic volumes over shorter distances and has a higher degree of property access. Minor collectors may serve as main circulation streets within large, residential neighborhoods. Most minor collectors are also township roads and streets and may, or may not, be through streets.

<u>Minimal or No Impact</u> - Roads: Local: A roadway that is primarily intended to provide access to abutting properties. It tends to accommodate lower traffic volumes, serves short trips (generally within neighborhoods), and provides connections preferably only to collector streets rather than arterials.
